

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) An electro-optical apparatus, comprising:

an electro-optical device ~~enclased in a mounting case and having an image display region on which projection light from a light source is incident; and~~
display region on which projection light from a light source is incident; and
a mounting case including a plate disposed to face one surface of the electro-optical device and a cover covering the electro-optical device, at least one of the plate and the cover including a surface that extends substantially parallel with the image display region of the electro-optical device, the surface being formed with a window, a portion of the cover abutting against the plate, the mounting case accommodating the electro-optical device by holding at least a portion of a peripheral region positioned at the circumference of the image display region of the electro-optical device with at least one of the plate and the cover,

the surface of the at least one of the plate and the cover being bonded to the electro-optical device by double coated adhesive tape at the periphery of the window.

2. (Canceled)

3. (Currently Amended) The electro-optical apparatus according to Claim 2
Claim 1,

~~at least one of the double coated adhesive tape and the mold material including a material having the heat conductivity of 0.6 W/m • K or more.~~

4. (Currently Amended) The electro-optical apparatus according to Claim 2
Claim 1,

the double coated adhesive tape including acryl rubber.

5. (Currently Amended) The electro-optical apparatus according to Claim 1,
~~at least one of the double coated adhesive tape and the mold material being~~
provided to correspond to the whole peripheral region,

at least one of the plate and the cover being bonded to the electro-optical
device over the whole peripheral region.

6. (Original) The electro-optical apparatus according to Claim 1,
the thickness of the double coated adhesive tape being in the range of 50 to
200 μm .

7. (Original) The electro-optical apparatus according to Claim 1,
at least one of an outmost surface of the plate and an outmost surface of the
cover being black.

8. (Currently Amended) The electro-optical apparatus according to Claim 7,
a plating process being performed on the surface of the at least one of ~~a surface~~
of the plate and ~~a surface of the~~ cover.

9. (Original) The electro-optical apparatus according to Claim 8,
the plating process being performed after performing a blast process on at least
one of the surface of the plate and the surface of the cover.

10. (Original) A projection display apparatus, comprising:
the electro-optical apparatus according to Claim 1;
the light source;
an optical system to guide the projection light into the electro-optical device;
and
a projection optical system to project the light emitted from the electro-optical
device.
